Reconnect mobile app to get you connected with all your school and college friends

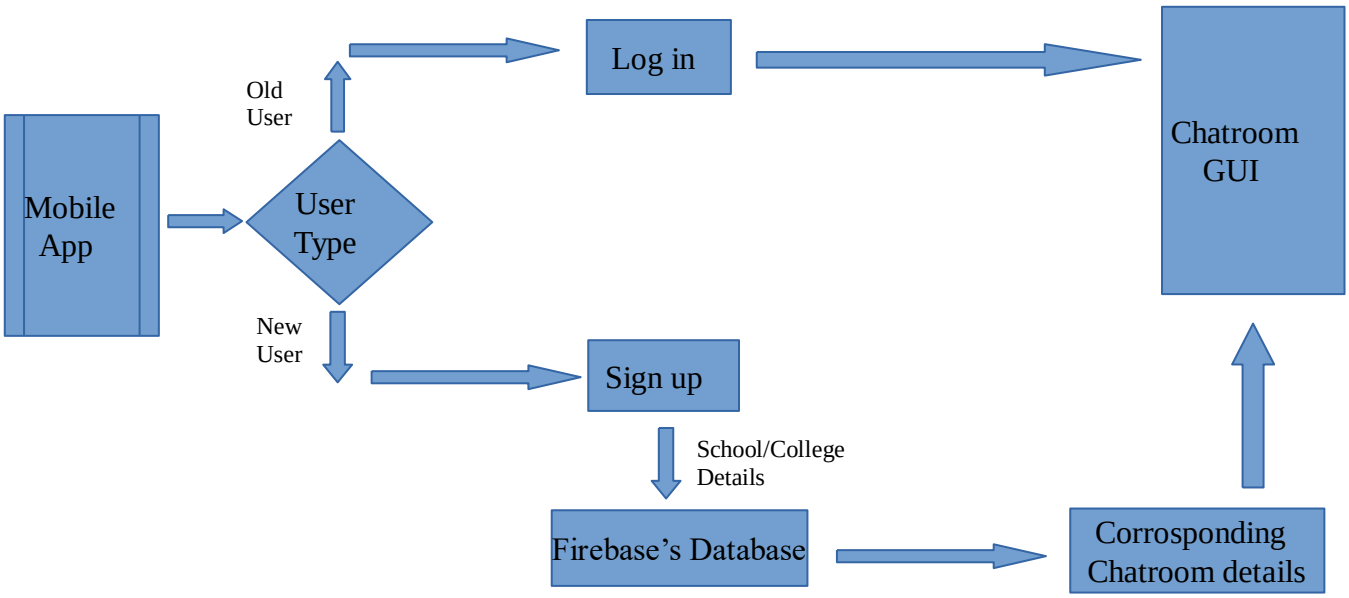
DBMS mini project 2020

Reconnecting with your old friends is something that is always in mind of all graduated people but due to absence of an intelligent platform they are only left to wander on various social networking sites to search to search individually for each person they remember. Our team decided to come up with and effective and feasible solution to this problem for this year's dbms mini project.

How app works
It's an android application which will run on most of the android devices, on opening the app the user will be asked to enter either sign up or log in. For sign up user will be asked to fill his school/college name and the year of graduation, after the login/sign up is done user will be automatically to a specific chat room consisting of people form that specific school/college and year of graduation.

Tech used
Frontend
We will be using android studio with java to build the UI for our application
Backend
We will be using Google's firebase as a backend to our mobile app, it will be used to storing and retrieving the academic details of the user which will later help in grouping them accordingly.

Working



Features of the app
- This app will reconnect you with all your school/college friends with just using your name and passing year
- The app will comprise only of 2 tabs(entry page and chat room) therefore final app would be very easy to use.
